

SASS (SCSS) – Interview Cheat Sheet

Core Concepts

Variables → store reusable values

Mixin → reusable block of styles

Include → apply a mixin

Nesting → structure styles like HTML

Variables Example

```
$primary: blue;

button {
  color: $primary;
}
```

Mixin Example

```
@mixin center {
  display: flex;
  justify-content: center;
  align-items: center;
}

.box {
  @include center;
}
```

Mixin with Parameters

```
@mixin btn($bg, $color) {
  background: $bg;
  color: $color;
}

.primary {
  @include btn(blue, white);
}
```

Default Values

```
@mixin card($padding: 20px) {
  padding: $padding;
}
```

Compile Commands

```
npx sass style.scss style.css
npx sass scss:css
npx sass --watch scss:css
```

Interview Answers

Q: What is Sass?

A: A CSS preprocessor that adds variables, mixins, and functions.

Q: Why use mixins?

A: To reuse styles and reduce duplication.

Q: Difference mixin vs function?

A: Mixin returns styles, function returns values.

Pro Tips

- Use mixins for reusable UI patterns
- Use variables for theme/colors
- Avoid over-nesting
